Date: 2/23/2007 9:25:23 AM
Subject: Appendix 7-10 Attachement

Jay/Dave:

Attached are the peakflow calculations that were included in the original package prepared for submission. This Attachment package had 303 pages of printout and the information was summarized in the Tables in Appendix 7-10 and the graphs in Attachment 2 of the Appendix. Based on discussions held back in Nov 2005, it was decided not to include these pages in the original submission, first to save trees and because of the summaries and graphs. Let me know if you want them included in the submission at this time.

The changes that were made on Little Park Wash drainage in December 2006 have not been included in this package. If you need those to be updated, I can add and resubmit them. Let me know what you want me to do.
